Water
Dye trace
Nutrients
Research on nutrient loads, calcite solubility, and development of water monitoring techniques. Includes installation of water sampling equipment at Ichetucknee Springs including Dampier's Landing, Cedar Head, and Mill Pond, and sensor platforms at the US 27 bridge and at the upstream and downstream ends of the rice marsh. Dye trace studies will take place in Ichetucknee River. The project includes installation of a small sensor at Rose Creek Sink. Grab sampling and sensor placements will occur at Peacock Spring and Madison Blue Spring and within the caves leading to these springs. Grab samples will be collected by hand and by automatic sampling equipment. Pore water will be collected by mini-piezometers.
Researcher sent several publications, presentations and reports from individual projects with the interim report. Additional reports are saved on the Gainesville server.
